Aspirazione / Aspiration

CAPPA CHIMICA MA90 - MA90 chemical fume hood

Dati Tecnici - Technical data:

	MA902022	MA902032	MA902052
L LARGHEZZA - width	1265	1565	1865
P PROFONDITA' - depth'	800		

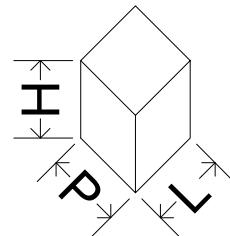

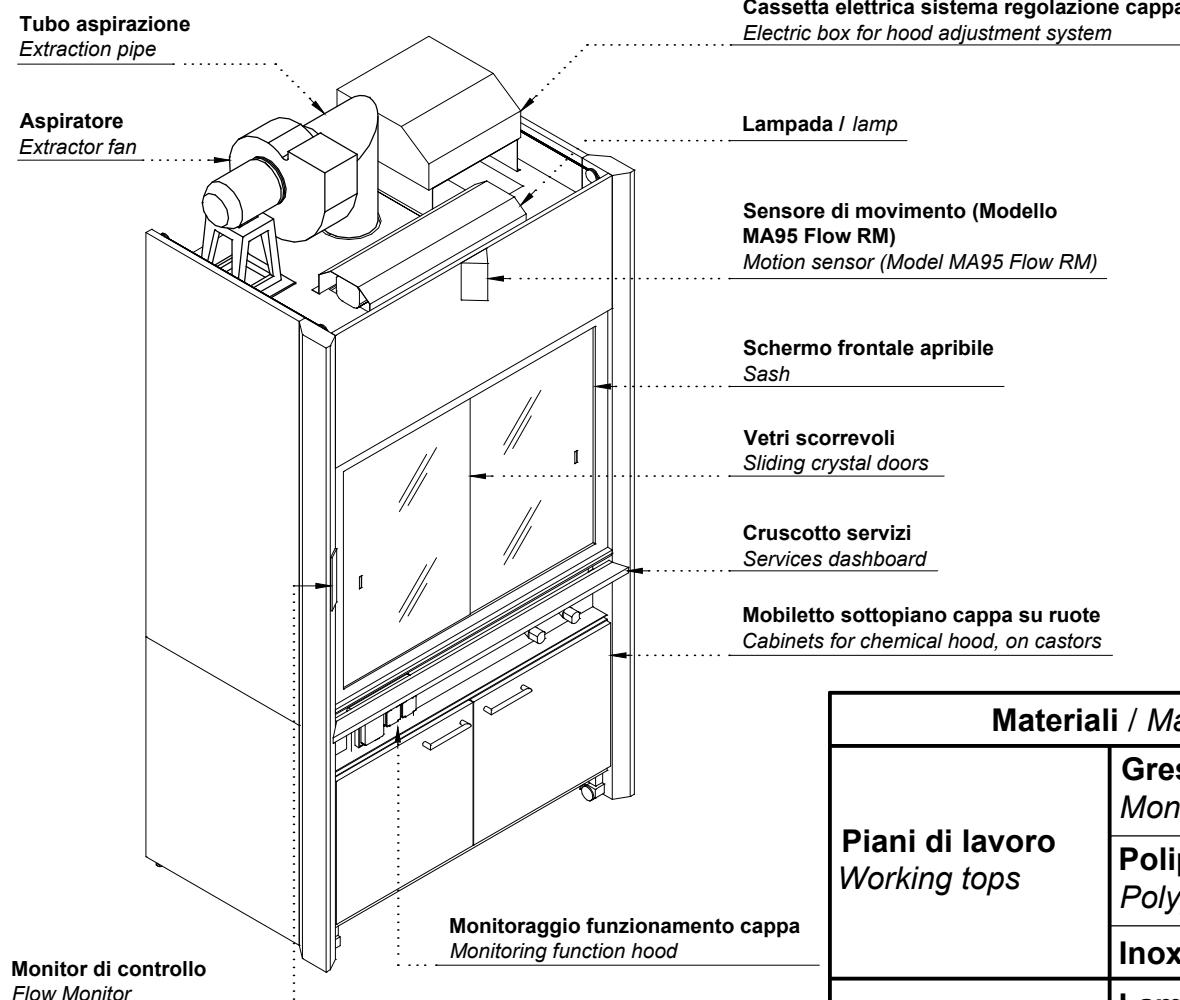

Materiali / Materials	
Piani di lavoro Working tops	Gres Monolitico Monolithic gres
	Polipropilene Polypropylene
	Inox / Steel
Rivestimento interno Inner surface	Lamiera / Metal
	Laminato / Laminate
	Polipropilene Polypropylene

La cappa chimica MA90 è studiata per garantire la massima protezione dell'operatore durante la fase di lavorazione di materiali potenzialmente pericolosi. La struttura ha una portata di 250 kg/mq. La cappa è inoltre dotata di doppio sistema di aspirazione, di sistema di sicurezza safety block che assicura il blocco della porta in caso di rottura delle funi di scorrimento, di indicatore di posizione operativa consigliata, di vetri di sicurezza scorrevoli orizzontalmente, di comandi utenze ergonomici. La cappa può essere dotata di diverse tipologie di piani per rispondere alle esigenze operative. Gli accessori prevedono: vasche, rubinetteria per gas e fluidi, quadri elettrici, mobiletti sottopiano perfettamente integrati per lo stoccaggio di prodotti infiammabili o per prodotti chimici, vari tipi rivestimenti interni, filtri ai carboni attivi. Disponibile anche nelle soluzioni bi-fronte per esercitazioni didattiche e nella soluzione castello da posizionare su banchi esistenti. La cappa MA90 è costruita secondo le vigenti normative tecniche UNI-DIN-DVGW-CEI relative agli arredi da laboratorio e alle normative di sicurezza negli ambienti di lavoro.

Chemical fume hood MA90 has been studied to assure the maximum operator's protection during the working phase of potentially dangerous materials. The structure's maximum load allowed is 250 kg/sqm. The fume hood is also provided with a double extraction system, a safety block system – that secures the door in case of sliding system's failure – with an operating position pointer, horizontally sliding safety glasses and with ergonomic taps. The fume hood can be equipped with different worktops and internal surface protection according to the needs of the laboratory. Available accessories: sinks, taps for gas and fluid, switchboards, integrated under cabinets for the storage of inflammable or chemical products, activated carbons filters. It is also available in a double front version for didactic purposes and in castle version to be positioned on existing benches. MA90 fume hood is realized according to UNI-DIN-DVGW-CEI safety regulations for laboratory furnishing and working areas.

CAPPA CHIMICA MA95 EVO - CERTIFICATA UNI EN 14175

MA95 EVO chemical fume hood obtained UNI EN 14175 certification

Materiali / Materials	
Piani di lavoro Working tops	Gres Monolitico Monolithic gres
	Polipropilene Polypropylene
	Inox / Steel
Rivestimento interno Inner surface	Lamiera / Metal
	Laminato / Laminate
	Polipropilene Polypropylene

La cappa chimica MA95 è studiata per garantire la massima protezione dell'operatore durante la fase di lavorazione di materiali potenzialmente pericolosi. La struttura ha una portata di 250 kg/mq. La cappa è inoltre dotata di doppio sistema di aspirazione, di sistema di sicurezza safety block che assicura il blocco della porta in caso di rottura delle funi di scorrimento, di indicatore di posizione operativa consigliata, di vetri di sicurezza scorrevoli orizzontalmente, di comandi utenze ergonomici. Il sistema di monitoraggio elettronico del funzionamento prevede segnalazioni sonore e visive di eventuali anomalie ed è espandibile con sistemi di regolazione o di gestione centralizzata degli impianti d'aspirazione. Moltepiice è la gamma di accessori per personalizzare la cappa secondo le reali esigenze del laboratorio in cui verrà installata: piani di lavoro e rivestimenti interni adatti a qualunque esigenza tecnica, vasche, rubinetteria per gas e fluidi, quadri elettrici, mobiletti sottopiano perfettamente integrati nella struttura per lo stoccaggio di prodotti infiammabili o per prodotti chimici, filtri ai carboni attivi. La cappa MA95 è perfettamente integrabile con entrambi i sistemi d'arredo Modulab95 e MA90. La cappa MA95 è certificata UNI EN 14175.

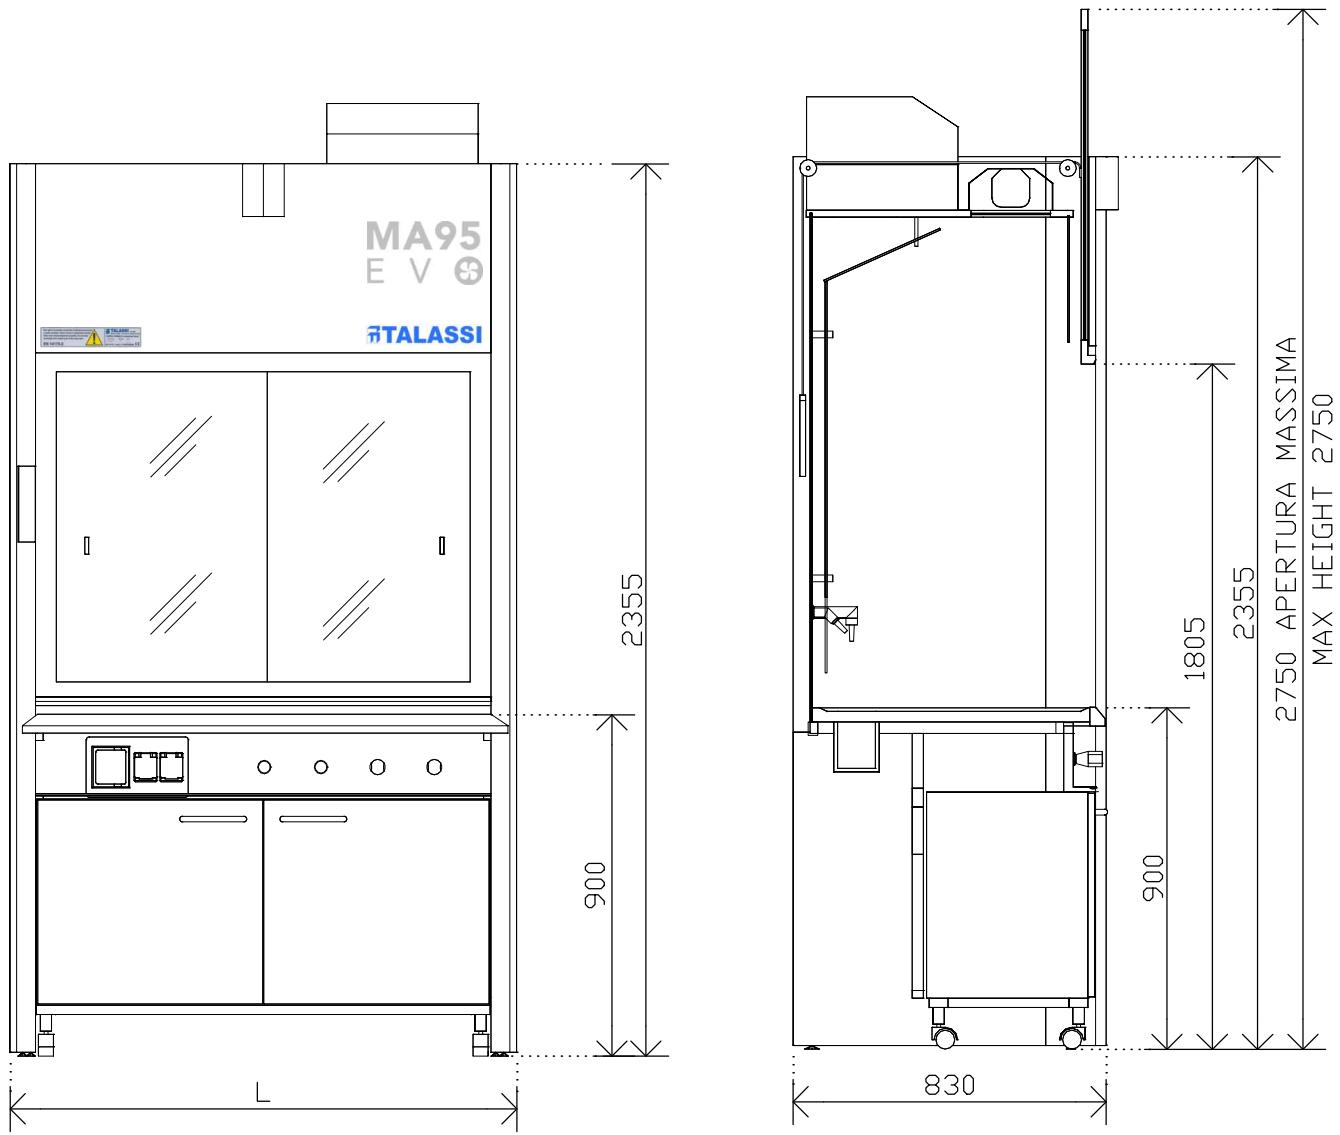

Chemical fume hood MA95 has been studied to assure the maximum operator's protection during the working phase of potentially dangerous materials. The structure's maximum load allowed is 250 kg/sqm. The fume hood is also provided with a double extraction system, a safety block system – that secures the door in case of sliding system's failure – with an operating position pointer, horizontally sliding safety glasses and with ergonomic taps. The electronic monitoring system is equipped with sound signals and visual alarms in case of possible anomalies and it can be expanded with centralized management or adjustment systems of extraction systems. A full range of accessories is available to customize the fume hood according to the real needs of the laboratory: working tops and internal surface protections suitable for any technical need, sinks, taps for gas and fluids, switchboards, activated carbons filters, under cabinet units perfectly integrated in the structure for the storage of inflammable or chemical products. MA95 can be perfectly integrated with both Modulab95 and MA90 systems.

MA95 chemical fume hood obtained UNI EN 14175 certification.

SPAZI CONSIGLIATI IN RIFERIMENTO ALLA NORMATIVA EN 14175-5

ADVISED SPACE WITH REFERENCE TO THE NORM EN 14175-5

La distanza tra la protezione frontale della cappa e qualunque parte del laboratorio frequentemente usata dal personale per l'attraversamento o il transito nel laboratorio stesso deve essere di almeno un metro (fig.1).

The distance from the sash to any part of the laboratory frequently used by other personnel in moving from one part of the laboratory or the building to another should be at least 1 m (fig.1).

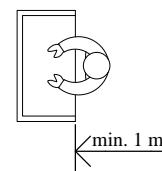

Fig.1
Distanza dalla protezione frontale
Distance to the sash

La distanza tra la protezione frontale della cappa ed il piano del banco usato dal medesimo operatore deve essere almeno 1,4 m (fig.2).

The distance between the sash and a bench top opposite to it and used by the same operator should be at least 1,4 m (fig.2).

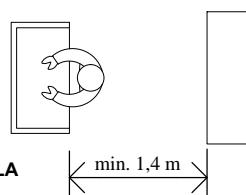

Fig.2
Distanza dalla protezione frontale al piano del banco
Distance sash to benchtop

NOTA: IN PRESENZA DI PIÙ DI UN OPERATORE PUÒ ESSERE NECESSARIO AUMENTARE LA DISTANZA.

NOTE: WITH MORE THAN ONE OPERATOR THIS DISTANCE MAY NEED TO BE GREATER.

Nel lato opposto alla protezione frontale della cappa non devono essere presenti muri (od altri ostacoli in grado di interferire con il flusso d'aria) entro una distanza di 1,4 m. (fig.3). In presenza di certi tipi o quantità di cappe potrebbe rendersi necessario aumentare questa dimensione sino a 2 m.

There should be no opposing wall (or other opposing obstruction likely to affect the air flow) within at least 1,4 m of the sash (fig.3). This dimension should be increased to meet larger air flow requirements of certain types or numbers of fume cupboards and can typically approach 2 m.

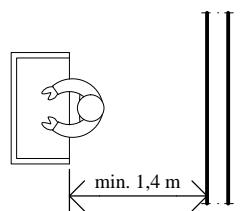

Fig.3
Distanza dalla protezione frontale al muro
Distance sash to wall

L'interazione tra file opposte di cappe che si fronteggiano con le protezioni frontali deve essere presa in attenta considerazione (fig.4)

The interaction between rows of fume cupboards which face each other sash to sash should be carefully considered (fig.4)

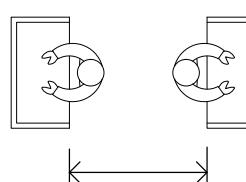

Fig.4
Distanza da protezione frontale a protezione frontale
Distance sash to sash

L'interferenza dell'immissione di aria della stanza modifica il rendimento della cappa e deve quindi essere attentamente considerata . Il flusso d'aria nella stanza non deve eccedere 0,2 m/s nella zona a 400 mm dalla protezione frontale della cappa . E' raccomandato un soffitto ad altezza di 3 m. e comunque una altezza minima non inferiore a 2,75 m.

The impact of room air inlets on the performance of fume cupboards should carefully be considered. Room air flow should not exceed 0,2 m/s at a zone 400 mm from the sash at the position given in. A ceiling height of 3 m is recommended and a height of 2,75 m should be the minimum.

Elementi costruttivi isolati, come per esempio colonne o pilastri, a lato della cappa e che si proiettano al di fuori della protezione frontale possono influenzare il rendimento della cappa stessa (vedi esempio nella fig. 5).

Large isolated obstructions, e. g. an architectural column, at the side of the fume cupboard and projecting beyond the plane of the sash can influence the performance of the fume cupboard (see example in fig. 5).

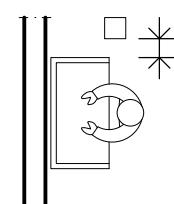

Fig.5
Distanza da protezione frontale a colonna
Distance fume cupboard to column

Nessun vano porta usato frequentemente dal personale deve essere entro il raggio di un metro dalla protezione frontale della cappa (fig.6) o entro 0,3 m. da un lato della cappa stessa (fig. 7) La raccomandazione non viene applicata quando si tratti di porte usate esclusivamente come uscita d'emergenza.

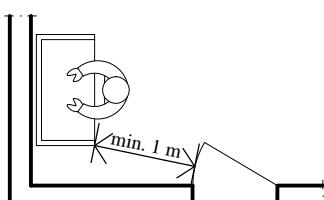

Fig.6
Distanza da protezione frontale a vano porta
Distance sash to doorway

No doorway frequently used by personnel should be within 1 m of the sash or within (fig.6) 0,3 m of the side of a fume cupboard (fig. 7). This recommendation does not apply for doorways exclusively used as emergency exit.

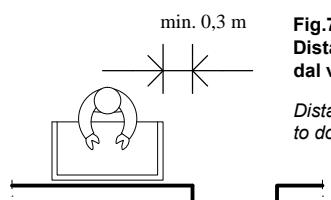

Fig.7
Distanza della cappa dal vano porta
Distance fume cupboard to doorway

ESTRAZIONE DEI FUMI E COMPENSAZIONE DEL SISTEMA DI VENTILAZIONE

Fume extract and laboratory make-up air systems

I parametri di ventilazione delle cappe all'interno di un laboratorio devono essere forniti ai progettisti dell'impianto di estrazione fumi e dell'impianto di compensazione dell'aria del laboratorio o dell'edificio al fine di assicurare una ottimale operatività della cappa.

The air requirements of the fume cupboards within a laboratory should be given to the designers of the fume extract and air make-up system of the laboratory room or building to enable the optimal function of the fume cupboards.

SCARICO FUMI

La cappa chimica necessita di una conduttura d'espulsione fumi all'esterno di adeguate dimensioni realizzata in materiali opportuni, si consiglia di evitare riduzioni di sezione (fig.1), percorsi lunghi e tortuosi (fig.2).

VAPOUR EXHAUST:

The hood needs an external vapour exhaust duct having suitable dimensions and made of suitable materials (fig.1), neither reduce sections nor utilize long and/or tortuous paths (fig.2).

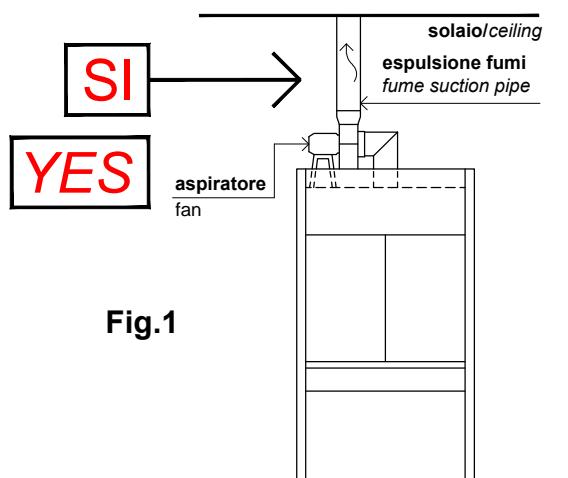

Fig.1

Note: every tampering, unauthorized modification or improper use let lapse the guarantee and our responsibility on the products.

REGOLAZIONE ASPIRAZIONE

Fume extraction control

Flow Monitor per Cappa MA 95 (Versione Flow / Flow R / Flow RM)

La cappa chimica MA95, conformemente alla normativa EN 14175-3, è dotata di un sistema elettronico che controlla e regola il flusso di aria aspirata. Per il funzionamento sicuro della cappa è infatti importante che il flusso d'aria (che attraversa il saliscendi) non scenda mai oltre il limite inferiore certificato dal costruttore.

La cappa MA 95 è dotata di un sistema di controllo, realizzato in tre diverse versioni:

- Versione MA95 Flow - Monitor per la rilevazione del flusso aspirato.
- Versione MA95 Flow R - Sistema per la regolazione del flusso aspirato (Opzionale)
- Versione MA95 Flow RM - Sistema per la regolazione del flusso aspirato + saliscendi motorizzato (Opzionale)

Flow Monitor Hood for 95 MA (Version Flow / Flow R / Flow RM)

The chemical hood MA95 , according to standard EN 14175-3, is equipped with an electronic system that controls and regulates the flow of intake air. For the safe operation of the hood is in fact important that the air flow (which crosses the sash) never falls over the lower limit certified by the manufacturer.

The hood MA 95 is equipped with a control system , realized in three different versions :

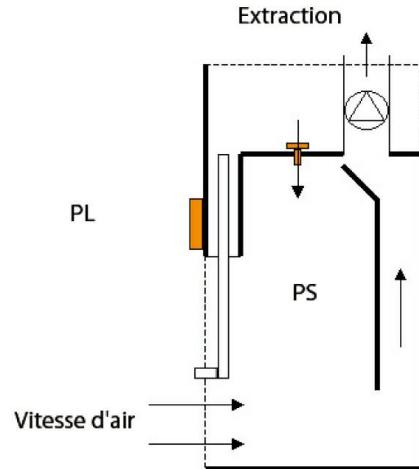

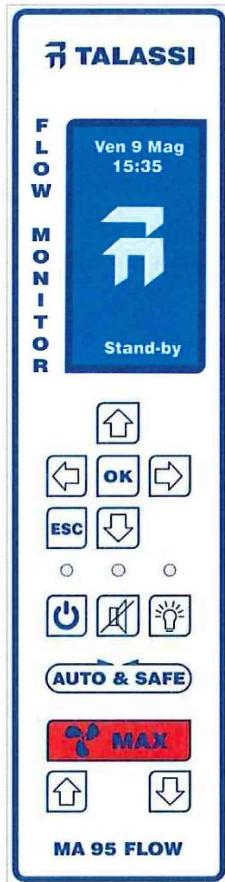

- Version MA95 Flow - Monitor for the detection of the intake flow .
- Version MA95 R Flow - System for adjusting the intake flow (Optional)
- Version MA95 Flow RM - System for adjusting the suction flow + motorized sash (option)

**IL SISTEMA DI CONTROLLO MA95 FLOW (Base) PUO' ESSERE AGGIORNATO
SUCCESSIVAMENTE ALLE VERSIONI MA95 FLOW R / MA95 FLOW RM.**
MA95 FLOW CONTROL SYSTEM (Basic) CAN BE UPGRADED TO VERSIONS -
FLOW R MA95 AND MA95 FLOW RM.

L'utilizzatore può impostare i parametri di controllo o consultare lo stato di funzionamento, premendo i pulsanti collocati sul pannello interfaccia .

The User can set the control parameters to or check the status of operation by pressing the buttons located on the interface panel.

Pannello controllo Flow Monitor Flow Monitor Control Panel

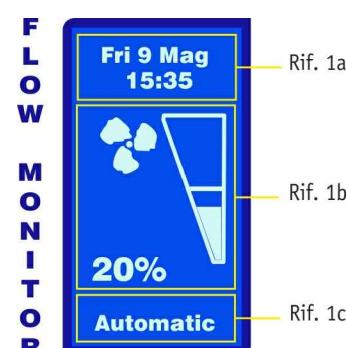

Il display LCD mostra i seguenti parametri operativi:

- Data e ora (Rif.1a)
- Barra del flusso d'aria aspirato (velocità sul frontale) - (Rif.1b)
- Percentuale della portata dell'aspiratore - (Rif.1b)
- Modalità funzionamento - (Rif.1c)

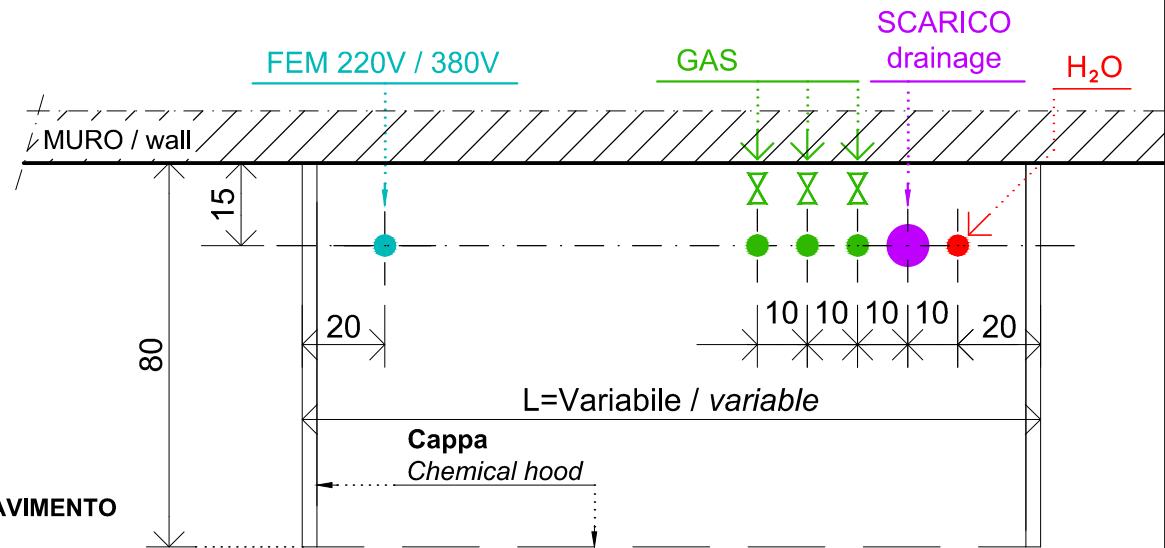

The LCD display shows the following operating parameters:

- Date and time (Ref.1a)
- Aspirated airflow bar (speed on the sash front) - (Ref.1b)
- Percentage of intake air rate- (Ref.1b)
- Operation Mode - (Ref.1c)

PARTICOLARE - SISTEMA D' ASPIRAZIONE
Aspiration system scheme

ARMADI ASPIRATI INDEPENDENTI ADATTI PER LO STOCCAGGIO DI PRODOTTI CHIMICI ACIDI / BASI

Extraction filtering cabinets for chemicals and acids / bases storage

Armadi aspirati indipendenti predisposti per lo stoccaggio di prodotti chimici acidi / basi.
Impianto elettrico interno completo, predisposto per l'allacciamento, con dichiarazione di conformità CE.
Costruito secondo DPR 577/92.
Secondo norme EN 61010-1

*Independent extraction cabinets for the storage of acid/bases chemical products. Complete internal electrical system pre-set for the connection.
CE conformity declaration
Realized in conformity with 577/92 PD.
According to EN 61010-1 regulation*

CAPPA MA90

Schema posizionamento fori d' aspirazione per cappe con armadi aspirati

Soluzione con Aspiratore - uscita verticale

**A** Altezza cappa + aspiratore

- Con motore VSB20 h → cm 300
- Con motore VSB25 h → cm 308

Dati Tecnici**B** Dist. da centro foro asp. a fianco esterno sx

- Con motore VSB20 cappa da cm 126.5 → cm 34.25
- Con motore VSB25 cappa da cm 156.5 → cm 46.45
- Con motore VSB25 cappa da cm 186.5 → cm 61.45

C Dist. da centro foro asp. a parte posteriore fianco

- Con motore VSB20 → cm 39.8
- Con motore VSB25 → cm 43.5

D Dist. da centro foro cappa a fianco esterno

- Cappa da cm 126.5 → cm 63.25
- Cappa da cm 156.5 → cm 78.25
- Cappa da cm 186.5 → cm 93.25

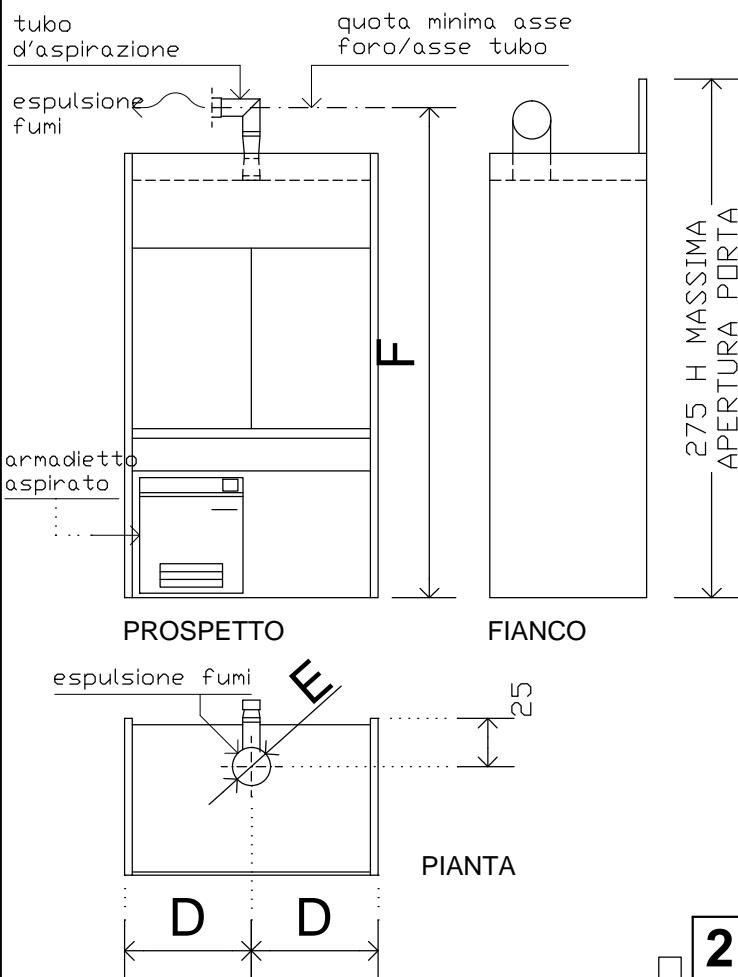

E Diametro foro cappa

- Con mot. VSB20 cappa da cm 126.5 foro → Ø 200 mm
- Con mot. VSB25 cappa da cm 156.5 foro → Ø 250 mm
- Con mot. VSB25 cappa da cm 186.5 foro → Ø 250 mm

F Altezza cappa + asse foro/tubo d' aspirazione

- Con cappa da cm 126.5 tubo Ø 200mm h → cm 269.0
- Con cappa da cm 156.5 tubo Ø 250mm h → cm 273.5
- Con cappa da cm 186.5 tubo Ø 250mm h → cm 273.5

Soluzione con tubo - uscita orizzontale

Scheme with extractor fan - vertical chimney

A Hood + extractor fan height **Technical Data**

- With VSB20 fan h → **cm 300**
- With VSB25 fan h → **cm 308**

B Distance from extractor hole center to left external side

- With VSB20 fan and hood cm 126.5 → **cm 34.25**
- With VSB25 fan and hood cm 156.5 → **cm 46.45**
- With VSB25 fan and hood cm 186.5 → **cm 61.45**

C Distance from extractor hole center to real panel

- With VSB20 fan h → **cm 39.8**
- With VSB25 fan h → **cm 43.5**

D Distance from extractor hole center to external side

- Hood cm 126.5 → **cm 63.25**
- Hood cm 156.5 → **cm 78.25**
- Hood cm 186.5 → **cm 93.25**

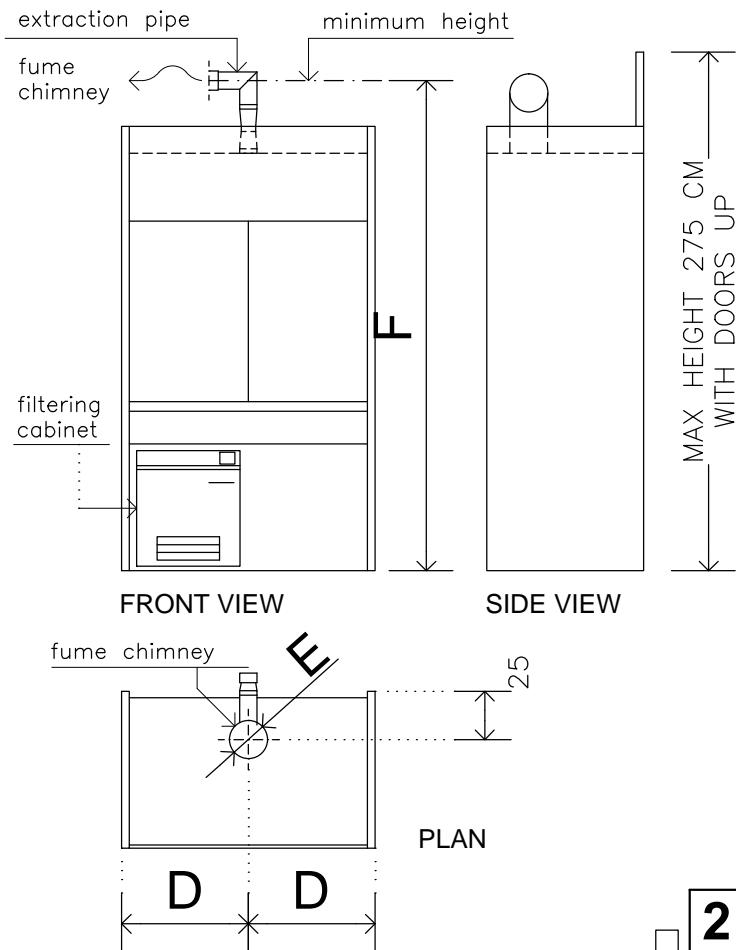

E Hood hole diameter

- With VSB20 fan and hood cm 126.5 hole → **Ø 200 mm**
- With VSB25 fan and hood cm 156.5 hole → **Ø 250 mm**
- With VSB25 fan and hood cm 186.5 hole → **Ø 250 mm**

F Hood height including extraction pipe

- With hood cm 126.5 pipe Ø 200mm h → **cm 269.0**
- With hood cm 156.5 pipe Ø 250mm h → **cm 273.5**
- With hood cm 186.5 pipe Ø 250mm h → **cm 273.5**
