**SERCA-Ca²⁺ Modulation Impairs
Glucocorticoid Resistance in *NOTCH1*-Mutated
T-Cell Acute Lymphoblastic Leukemia**

Laureanda: Costanza Salvatori

Relatore: Prof. Giovanni Roti

Anno accademico 2021/2022

T-Cell Acute Lymphoblastic Leukemia (T-ALL)

- T cell acute lymphoblastic leukemia (T-ALL) is an aggressive hematologic tumor resulting from the malignant transformation of T cell progenitors
- High tumour burden with uncontrolled clonal expansion of malignant lymphoid cells
- It counts for 10–15% of paediatric and 25% of adult acute lymphoblastic leukemia (ALL) cases
- *NOTCH1* mutations are observed in 40% to 70% of childhood and adult T-cell acute lymphoblastic leukemia (T-ALL)

The Notch1 Pathway

**NOTCH1
Extracellular
Domain**

**NOTCH1
Transmembrane
Domain**

P-Type ATPase-SERCA and NOTCH1

SERCA and NOTCH1

SERCA Inhibitors
Thapsigargin, CPA

Thapsigargin

LIMITATIONS

- Unmodified TG is difficult to administer and deliver systemically without significant nonspecific host toxicity (cardiac toxicity).
- TG-induced inhibition of SERCA leads to depletion of the ER Ca^{2+} pool. Activates plasma membrane calcium channels, thereby resulting in an influx of extracellular calcium.

SOLUTIONS

- Improve TG delivery (tumor specificity):
 - Antibody-based strategy
 - Folic acid endocytosis strategy

Roti et al. 2018, JEM

- Generate isoform specific SERCA inhibitors

EU-OPENSSCREEN Identifies Different Sensitivity Profiles

- Small molecule library screening in TG-sensitive and resistant cell line (ALL/SIL and ALL/SIL R)
- The screening library is part of the **European Chemical Biology Library (ECBL)**
- 2464 bioactive compounds screened
- The compounds are active against 1039 different targets (654 approved drugs and 368 highly selective probes from the public domain).
- Pathway coverage: cellular response to stress, Immune System, Signal Transduction, Developmental Biology, Gene Expression (Transcription), Hemostasis, Metabolism of proteins, Cell Cycle, Neuronal System

EU-OPENSOURCE Identifies Different Sensitivity Profiles

- Small molecule library screening in TG-sensitive and resistant cell line (ALL/SIL and ALL/SIL R)
- The screening library is part of the **European Chemical Biology Library (ECBL)**

Conclusions

- Prolonged administration of TG induces the rising of mutations at the ligand binding site (LBD)
- As long as *ATP2A2^{mut}* and wt cell line are syngenic, the LBD mutation induces transcriptomic modifications and generate sensitivity to glucocorticoids
- SERCA inhibition synergize with glucocorticoids in *ATP2A2^{mut}* cell lines
- The R cell lines shows a gene expression profile that is similar to the gene expression pattern of TAL1 T-ALL genotypic subgroup
- The dissection of metabolic pathways could help to define the relationship between SERCA and glucocorticoid metabolism
